8. Highest speed is 30 Km/h. For your safety, please limit the speed to 20 Km/h. Please try to avoid using it at night, if needed, please limit the speed within 15 Km/h or less and turn the headlights on.

9. Do not use the scooter when the outside temperature is lower than 0ºC.

10. Please slow down or get off from the scooter when riding in poor road conditions.

11. Do not ride the scooter in oily or icy surface terrain.

12. Please adjust the handlebar according to your height to ensure a safe riding.
13. To avoid damages of the electrical parts of the vehicle please do not immerse the scooter in the water with the depth of more than 4 cm and do not wash it with water under pressure.

14. For protection please do not ride the scooter in bad weather such as heavy rain and high winds.

15. Do not drink alcohol and drive E-Twow scooter.
PRODUCTS

Folding stages

A – unfolded

B - folded handlebars

C - fully folded
Folding steps

1. Open the **lock lever**, in the direction of arrow, as shown in figure (a).
2. Press the **red button**, figure (b), at the same time press down handlebars as shown in figure (c) and push the **lock lever** to the lock position.
3. Hold the **handlebar** with both hands, push buttons (1) shown in Figure (d). Pull out the **handlebar** grips (figure d), up to the maximum and fold downwards to maximum like in figure B, from previous page.
4. Push the **handlebar** forward when you press the **folding lever** in the direction of the arrow in the figure (f).
5. Continue folding the scooter until the **folding hook** reaches the **opening** located on the **rear brake**.

![Diagram of folding steps](image)
Unfolding steps

1. Press the **rear brake** in the direction of the arrow in the figure (a) until the **folding hook** release from the opening located on the rear brake. Then, lift the **handlebar** until it reaches the working position and the **locking bolt** comes into place, like in figure (b).

2. Raise the two handles of the **handlebar** until they automatically return to the work position, figure (c).

3. Push the **lock lever** in the direction of the arrow in Figure (d) and lift handlebars to desired height. Now press button shown in Figure (e) and fix it in one of the two holes, as desired.
OPERATION

1. Introduction of Handlebar parts

1. Thumb Accelerator
2. Thumb Electronic Magnetic Brake
3. Switch Button
4. Setting Button
5. On/Off Light Button
6. Horn Button
7. Led Headlight
8. Handlebar Fold Button
9. Display

2. Operating Instructions

a. ON/OFF
Press the switch for 1 sec, and the display will light indicating the power is on. Press for 3 seconds if you want to turn it off. It will turn off if you don't use it for 3 minutes.

b. Speed control
Press the right thumb accelerator to control the speed (1-30km/h).
c. Breaking Control
Press the left thumb and the electronic magnetic brake will operate. The greater pressure you put, the greater breaking force will be.

d. Horn

e. Horn
Turn on the power, when pressing the horn button it will hoot.

f. LED Headlight
In manual mode: Press the On/Off Light button when needed and there will be a sign in display indicates the light is turn on. Press the button again when you do not need the light.
The scooter is equiped with a sensor light that detects the need of light. The light will turn on automaticaly (auto light mode) if the sensor detects poor ambiental light.
For example: when is cloudy weather and the auto light mode is on, the light turns on. If the daylight is proper, the auto light mode detects the light and the headlights will go off after 5 seconds.
On auto light mode, the display is also lighted depending on the ambiental light.
If the scooter is on auto light mode, you can go to manual mode by pushing the On/Off Light Button.

g. Mileage Show
When power off, it shows time.
When the display is powered on, it displays three modes: total, trip and time. You can change it by pressing the settings button. In 'trip' mode, press the setting button (S) for 3 seconds and it will clear the trip.

h. Emergency
In an emergency, it’s recommended to use the foot brake.
3. Display Factory Setting

To access the menu P0 and P1 please press at the same time the switch and setting buttons. Pressing the setting button helps you switch between P0 and P1.

Both menus have other two submenus: 0 and 1, as follows:
- P00 (a) - displays the speed in km/h and temperature in Celsius degrees
- P01 (b) – displays the speed in mile/h and the temperature in Farenheit degrees
- P10 (c) – lights are set on manual mode
- P11 (d) – lights are set on auto mode

You can switch between menus 0 and 1 in P0 or P1 by pressing the on/off button.

When you press the setting button (S) at last and the settings will be finished.
RIDING OPERATION

Ready

1. Choose a suitable venue for riding.
2. Expand the scooter in accordance with the description.
3. Adjust the T-pipe to the suitable height according to your height.

Start

1. Press the power button to turn on the power.
2. Stand one foot on the scooter and leave another foot on the ground.
3. Gently press down on the right thumb accelerator, the scooter will immediately move forward slowly. Place the foot which is on the ground on the scooter. With big finger of your right hand press the right thumb accelerator, the greater pressure you put, the faster it will go.

Brake

1. Under normal circumstances, pressing the left thumb electronic magnetic brake, the scooter will be immediately de-energized and then it will brake. The greater pressure you put, the greater breaking force will be.
2. **E-Twow** also has a rear foot brake that triggers the motor brake immediately in addition to a friction brake on the back wheel. So whatever the situation is, if the first system is deactivated you can still use the foot
brake.
The electronic brake activates kinetic energy recovery system.

**Cruise control**
You can set up the speed as you want during the driving, and the scooter will start moving on the same speed afterwards. Press the acceleration right thumb and keep the same speed for 5 seconds and the cruise control will automatically enter. You can switch the function off easily as well.

**Zero start**
This function is for safety. When you want to ride the scooter, you should use your foot to slide it for a little distance, then press the right thumb accelerator, the scooter will go ahead. When you don't use the scooter, if you press the right thumb accelerator by mistake, the scooter can't go ahead.
BATTERY AND CHARGER

Each E-Twow electric scooter is equipped with a special lithium polymer battery and special smart charger. These accessories that come with each scooter have a dedicated number, please do not use the chargers from other brands. If the battery or charger will be damaged owing to these, our company will not be responsible.

Battery
When you get the E-Twow electric scooter for the first time, please charge the battery fully before using.
The battery can be charged at any time, in order to ensure that the battery has power, during which the battery will not charge for any damage.
Warning: do not use batteries from other brands, it will not work with E-Twow scooter.
Please charge the battery once every three months if stop using the scooter.
Water immersion, collisions, and other abnormal factors will lead to battery damage, which is not covered under warranty.

Charger
The company provides dedicated charger which has a charging protection function, when the battery is 100% charged, the charger will automatically stop charging. Charging time is no more than 3 hours.
Water immersion, collisions, and other abnormal factors will lead to charger damage, which is not covered under warranty.

Charge Description
Open the charging hole rubber protective cover, put the charger connector into the charging hole.
Connect the charger plug into the power socket.
It means it is charging when charger light is red, charger light turns green when the battery is fully charged.
MAINTENANCE

Lubricating
Please add a small amount of grease or lubricants to handle folded position every six months.
Please check scooter every three months if the screws are loose it up.

Battery
The lithium polymer batteries provided by our company can be recharged at least 500 times, the normal use can reach more than 1,000 times.

Placement and daily care
Do not expose the scooter under the sun or wet places for too long time. Please keep the scooter clean and dry.
For cleaning use a damp cloth and a mild detergent.
GENERAL TROUBLESHOOTING

Checklist
When the products have any problems, please refer to the following methods.

1. **LED display black screen**
   Reason: Exposure under the sun for too long.
   Solution: Place it in shadow and it will return to normal after a period.

2. **Values from the display do not fit the actual values. Reason:**
   Parameters are set incorrectly or missing.
   Solution: Please reset the display to the factory settings.

3. **No information on digital display**
   Reason: Bad battery contacts or the battery is dead.
   Solution: Turn off the power then restart again, if the problem still occurs, please contact your local reseller.

In case that the product still does not operate normally, please contact your local vendor or reseller.
